

Use of Boat Cradles at CCSC

- ✓ All cradles will be inspected by the lift team prior to lift out. Boats will not be lifted onto any cradles that are not working correctly or are deemed not fit for purpose. If there are any disagreements at this point the owner will need to have a suitable document showing that the cradle has been certified as fit for purpose.
- ✓ **Cradles once positioned and boat has been set, under no circumstances must any legs/props be removed without first putting adequate support in place. If in doubt Ask !!!**
- ✓ All Sails must be removed prior to boat being lifted out, and likewise no sails are to be fitted before boat goes back into the water.
- ✓ Once boat has been secured on land, please continue to remove sprayhoods / dodgers etc. if not already done so.
- ✓ Please ensure booms are fixed securely to prevent them swinging around in the breeze.
- ✓ Any items left on the deck of the boat for any reason must be securely fixed.
- ✓ Any Ladders/platforms used must be fit for purpose and ladders secured to boat whilst in use.

Acceptance of the use of any cradle by the lift team indicates that no strikingly obvious faults were found by the lift team. The safe use of any cradle remains the responsibility of the owner at all times.

I hope these items above are clear and trust all will ensure we stick to the rules to help prevent any accidents whilst ashore at CCSC.

This has been written with Risk Assessment 7 Use of Cradles. Version 1 2018
